

Fork Positioner for Forklift

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus which can allow the the one driving to operate the forklift without leaving the seat. They are constructed out of top quality materials and are designed to be able to withstand the most challenging operations and work surroundings. Side shifting units have the extra ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate lifting and placement in a quicker and much more efficient way.

The fork pocket is quite unique and could enable the individual operating it to securely swing the blades into position without any worry of damaging the positioning cylinders. This can allow the driver the option to be able to perform simultaneous or independent fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into fork positioners on existing units.
